## COMPLETE CONTAINER PRODUCT LINE

### 7A Type A Steel Drums

Our drums have been tested according to DOT 7A Type A, IP-1, IP-2 and IP-3 regulations and are intended for use as shipping and storage containers for permissible radioactive materials.

- Made from carbon steel
- 10, 16, 30, 55 and 85 gallon capacities
- Compliant with DOE regulations
- UN Performance Rated

### ISO Export Steel Drums

Our 55 gallon (208 L) steel drum with a "W" swedge configuration that is available as an openhead or tighthead. It is specifically designed to optimize transportation for drums being shipped overseas.

- Fits 4 abreast in overseas shipping containers
- UN Performance Rated
- Meets ISO & ANSI MH2a-1998
- Improved vacuum/pressure performance
- Safer transport with "w" swedge configuration
- Reduces freight cost by 11%

### Salvage/Overpack Steel Drums

Our salvage drums are designed to hold damaged/leaking drums to ensure safe transportation through public areas. Overpack drums are used as additional protection for the shipment of drums and other packages.

- UN Performance Rated Salvage Drums
- All coatings available
- All black with white head
- All yellow with black "Salvage Drum"
- Superior stacking strength
- Ultimate fire protection
- Designated overpack container

**RoundTrip™ Collection: Have empty drums you want collected? Contact us!**

## COMPLETE CONTAINER PRODUCT LINE

### Knock Down Steel Drums

Myers Container provides the formed, welded and nested components for assembly with a "knock-down" system. Over sixty (60) shells can be nested on one pallet.

- Offered in 55 gallon capacity
- Includes welded bodies, bottoms and covers for both openhead and tighthead drums

### Chime Drums

Product expansion inside a sealed drum caused by external heat requires special reinforcement to prevent the drum from what can be described as bulging, crowning, or bloating. By applying an additional 12 gauge ring on the top and bottom rolled seam of the drum (the chime), we increase the drums capacity to resist deformation and leaking due to expansion of materials and also protects the seal from damage during loading, shipping, or movement in your facility if the bottom chime hits a sharp or blunt object.
